What?

An AI camera that can track objects.

Who?

For anyone and anyplace! This product is versatile and can be used in many ways. There are some examples in the purpose statement.

By using machine learning to train the camera to identify objects and code it to alert the user of certain situations. such as a lost item or a misused item.

How?

Because It can be very helpful (and cool) for many people and situations. I like it because you can take digital code and incorporate it into the real world.

Why?
